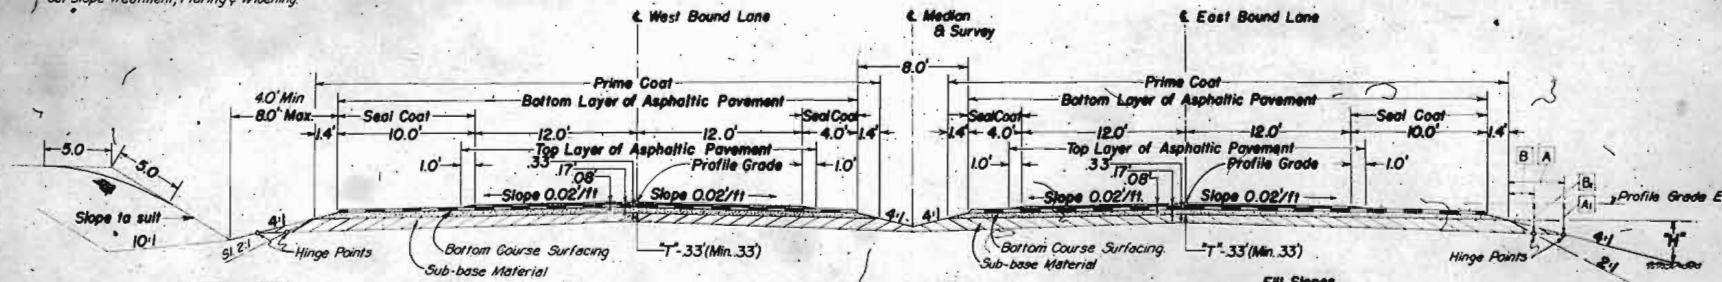
TYPICAL CROSS SECTION OF IMPROVEMENT

FEDERAL ROAD REGION NO.	DIVISION	PROJ. NO.	SHEET NO.	TOTAL SHEETS
9	COLORADO	C 10-0083-04	2	

NOTE:
See Standards for Details of Cut Slope Treatment, Flaring & Widening.



GENERAL NOTES

This project is to be Constructed in conformity with the standard specifications of the Colorado Department of Highways, adopted January 1, 1958.

All quantities on preliminary plans are to be considered approximate only.

All poles encroaching on construction are to be moved by the owners.

All Corrugated Metal Pipe Cross Culverts shall be laid with Metal Aprons on each end unless otherwise noted on the plans.

All thicknesses of Surfacing and Asphaltic Processing are approximate.

All curves are to be superelevated and widened as provided by the Standard Superelevation sheet included with the plans.

For preliminary plan quantities of Asphaltic Road Materials, the following rates of application were used:

Prime Coat: Roadway . . . @ 0.40 Gals. per Sq. Yd. (Future Construction)
Prime Coat - Bridge . . . . @ 0.10 Gals. per Sq. Yd.

Rate of application and grade of Asphaltic Material shall be as determined by the Engineer at time of application.

Road approaches are to be covered with 4" of Sub-base Material in lieu of 4" of Gravel or Crushed Rock Surfacing as shown on Standard M-2-EN.

Application methods for liquid asphaltic road material, which result in the discoloration of concrete pavement, curbs or gutters, will not be permitted.

Prime Coat and Asphaltic Surfacing shall be placed over the curbed width of the bridge at Sta. 22+.

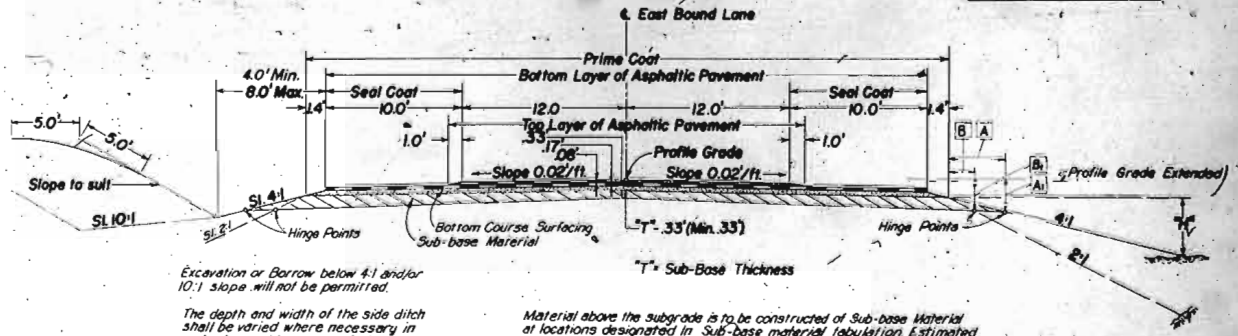
Fill Slopes

On Curves:
Slope 4:1 where "H" is 5' or less
Slope 2:1 where "H" is over 5'

On Tangents:
Slope 4:1 where "H" is 3' or less
Slope 2:1 where "H" is over 3'

East Bound Lane
Table of Side Slope
Hinge Points for Sub-base Mat'l.

"T"	"T"-4"	Sl 4:1		Sl 2:1	
In	Ft.	Ft.	A	A_1	B	B_1
5	4.2	.33	2.2'	-.6'	1.1	-1.3
9	7.5	.42	3.9	2.0	1.6	-.9



Excavation or Borrow below 4:1 and/or 10:1 slope will not be permitted.

The depth and width of the side ditch shall be varied where necessary in order to provide proper drainage and/or entrance to drainage structures.

"T" = Sub-Base Thickness

Material above the subgrade is to be constructed of Sub-base Material at locations designated in Sub-base material tabulation. Estimated quantities involved in this operation and thickness of material required are tabulated in the Sub-base Material plan.

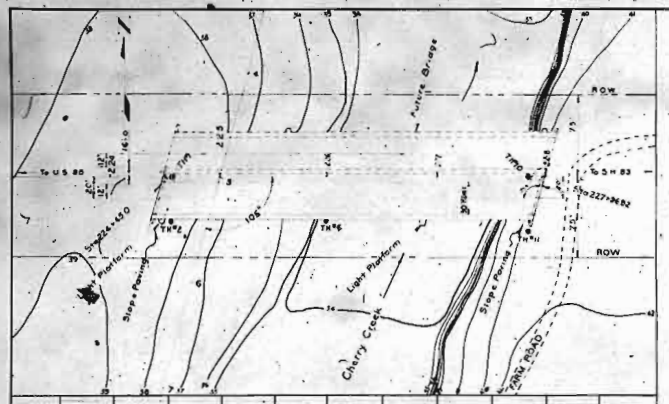
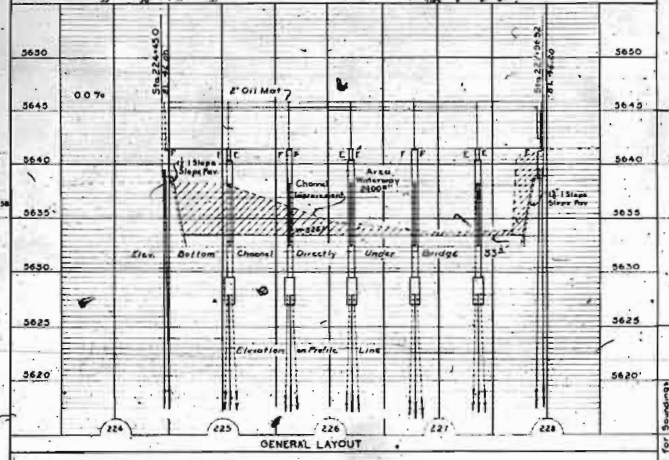
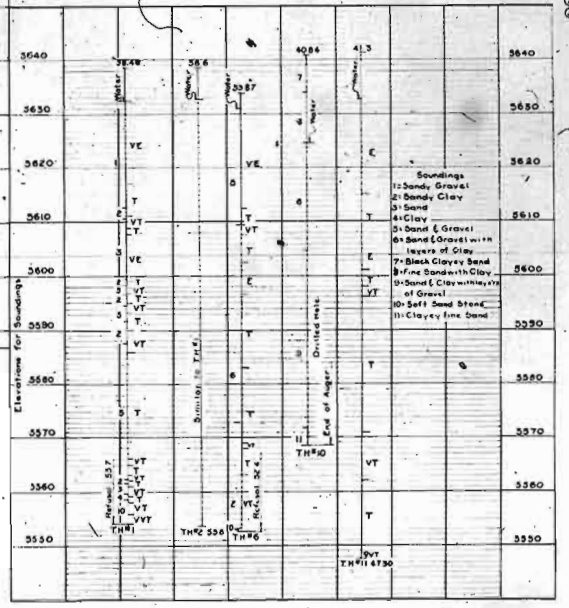
① Includes 20% of approach surface Area
② Includes 4.9 20 lb. of guard rail posts
③ Expansion Joint Material shall be in accordance to AASHO Spec. M 153-54 Tent or Mfr. type Stamp and shall be inserted in the Mfr. Plant for Items







GENERAL NOTES

ALL WORK SHALL BE DONE ACCORDING TO THE STANDARD SPECIFICATIONS OF THE COLORADO DEPARTMENT OF HIGHWAYS APPLICABLE TO THE PROJECT.

ALL CONCRETE SHALL BE CLASS 'A' AIR ENTRAINED AS SPECIFIED.

ALL CONCRETE SURFACES MARKED WITH FINE SYMBOL "F" AS SHOWN ON SHEET No. 2 SHALL RECEIVE CLASS 1 SURFACE FINISH.

CONCRETE SLABS AND FLOOR SLABS SHALL BE POURED MONOLITHICALLY.

FORMS FOR CONCRETE SURFACES EXPOSED IN THE FINISHED WORK SHALL BE CONSTRUCTED OF PLANED OR SURFACED AND EDGED LUMBER 1 1/2 INCHES FACED WITH PANEL BOARD.

FOOTINGS IN ROCK SHALL BE POURED OUT TO ROCK AND NOT FORMED.

REINFORCING BARS SHALL BE PLACED AS SHOWN ON PLANS WITH THE BEST AVAILABLE CLEARANCES AND SECURELY TIED. SPLICES SHALL BE AS DIRECTED BY THE ENGINEER WHEN NOT SHOWN ON PLANS.

ALL REINFORCING STEEL SHALL CONFORM TO ASTM SPECIFICATION A 305 OR THE LATEST REVISION THEREOF AND SHALL BE INTERMEDIATE GRADE STEEL OF A DEFORMED TYPE EACH BAR SHALL BE TAGGED WITH THE NUMBER DESIGNATION AND THE STATION NUMBERS OF THE PROJECT. (DIAMETERS OF THE BAR DESIGNATIONS FOR REINFORCING STEEL NOT SHOWN AS EQUIVALENT TO THE CENTER LINE OF THE BAR. SECONDARY BARS WHEN SPACERS SHALL BE USED SHALL BE SPACED AS SHOWN ON PLANS OR AS DIRECTED BY THE ENGINEER.)

ALL STRUCTURAL STEEL SHALL BE PAINTED ONE SHOP COAT OF ZINC CHROMATE AND TWO FIELD COATS OF ALUMINUM, UNLESS OTHERWISE NOTED EXCEPT THE UNDERSIDE PORTION OF STEEL RAILING NEED NOT BE PAINTED.

HANDRAIL BOLTS SHALL HAVE HEX HEADS, NUTS AND LOCK WASHERS UNLESS OTHERWISE SPECIFIED AND ALL RIVETS EXCEPT AS NOTED ARE ⅞", DIA AND SHALL BE POWER DRIVEN.

WHEN TREATED TIMBER OR PILING IS SHOWN ON THE DRAWING THE PRESERVATIVE FOR TREATMENT SHALL BE CREOSOTE OIL.

WHEN EXCAVATING FOR FOOTINGS THE FINAL ONE FOOT IN DEPTH SHALL BE DONE BY HAND LABOR METHODS.

FOR DETAILS OF STRUCTURAL EXCAVATION AND STRUCTURE BACKFILL, SEE SECTION 206 OF THE SPECIFICATIONS.

IF BY PERMISSION OF THE ENGINEER REINFORCING BARS ARE SPLICED, THEY SHALL LAP A MIN OF 20 DIAM FOR BARS NEAR TOP OF BEAMS HAVING MORE THAN 12 INCHES OF CONCRETE UNDER THE BARS AND 17 DIAM FOR BARS NEAR BOTTOM OF MEMBERS.

FALSE WORK SHALL REMAIN IN PLACE FOR A LENGTH OF TIME ALL GIRDER POUR HAS REACHED A MINIMUM STRENGTH OF 2500 P.S.I.

NOTE:
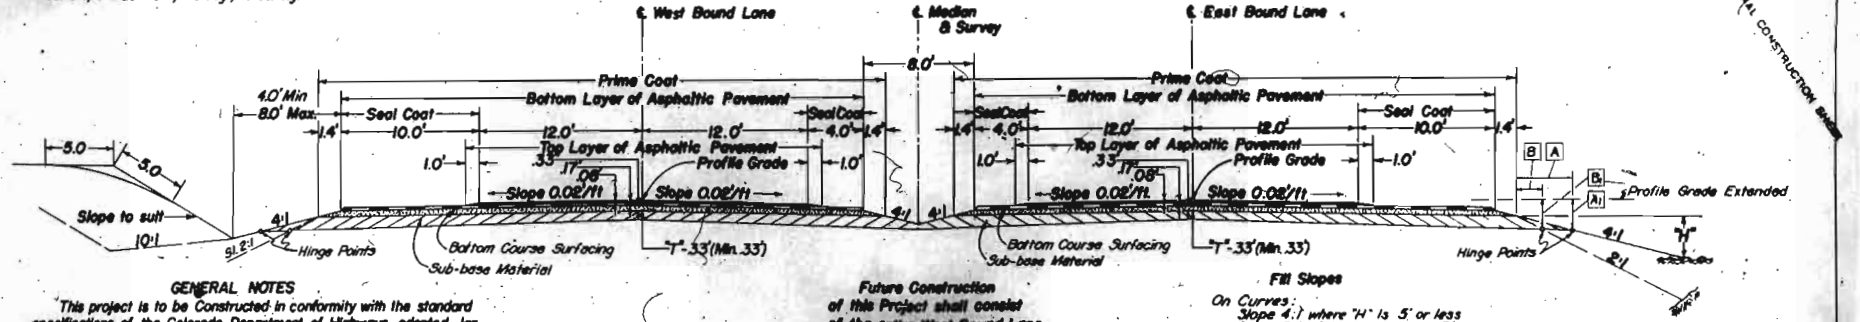
See Standards for Details of
Cut Slope Treatment, Flaring & Widening.



GENERAL NOTES

This project is to be Constructed in conformity with the standard specifications of the Colorado Department of Highways, adopted January 1, 1958.

All quantities on preliminary plans are to be considered approximate only.

All poles encroaching on construction are to be moved by the owners.

All Corrugated Metal Pipe Cross Culverts shall be laid with Metal Aprons on each end unless otherwise noted on the plans.

All thicknesses of Surfacing and Asphaltic Processing are approximate.

All curves are to be superelevated and widened, as provided by the Standard Superelevation sheet included with the plans.

For preliminary plan quantities of Asphaltic Road Materials, the following rates of application were used:

Prime Coat - Roadway . . . @ 0.40 Gals. per Sq. Yd. (Future Construction)
Prime Coat - Bridge . . . . . @ 0.10 Gals. per Sq. Yd.

Rate of application and grade of Asphaltic Material shall be as determined by the Engineer at time of application.

Road approaches are to be covered with 4" of Sub-base Material in lieu of 4" of Gravel or Crushed Rock Surfacing as shown on Standard M-2-EN.

Application methods for liquid asphaltic road material, which result in the discoloration of concrete pavement, curbs or gutters, will not be permitted.

Prime Coat and Asphaltic Surfacing shall be placed over the curbed width of the bridge at Sta. 224+.

Future Construction of this Project shall consist of the entire West Bound Lane and the Base Course and Asphaltic Surfacing of the East Bound Lane.

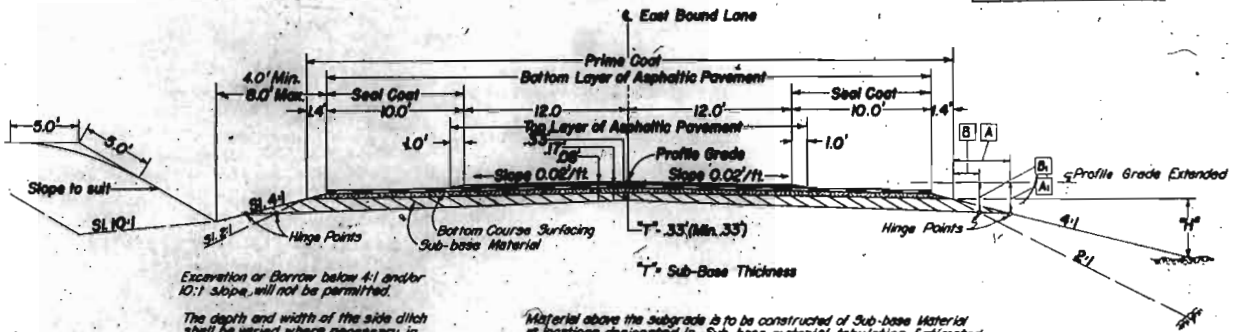
Fill Slopes

On Curves:
Slope 4:1 where "H" is 5' or less
Slope 2:1 where "H" is over 5'

On Tangents:
Slope 4:1 where "H" is 3' or less
Slope 2:1 where "H" is over 3'

East Bound Lane
Table of Side Slope
Hinge Points for Sub-base Mat'l.

"T"	"T-4"	Sl. 4:1		Sl. 2:1	
In.	Ft.	Ft.	A	A_1	B	B_1
3	42	.33	2.2'	-.6	1.1	-.5
9	75	.42	3.9	-2.0	1.6	-1.9



Excavation or Borrow below 4:1 and/or 10:1 slope, will not be permitted.

The depth and width of the side ditch shall be varied where necessary in order to provide proper drainage and/or entrance to drainage structures.

Material above the subgrade is to be constructed of Sub-base Material at locations designated in Sub-base material Tabulation. Estimated quantities involved in this operation and thickness of material required are tabulated in the Sub-base Material plan.

Note:
Alignment and Grades as shown are subject to modification during construction after approval by the Denver Office.
Soil Data shown on the Plans is obtained from best available testing laboratory information. This information is shown for convenience of the Contractor and The Department does not Guarantee the accuracy of these Tests. If Materials not conforming to the Data on Plans are encountered during Construction, The Grading Plan shown on Plans will be modified where necessary to secure Dense, Stable Embankments.
