GENERAL NOTES

1. THIS RIGHT OF WAY PLAN IS NOT A COMPLETE BOUNDARY SURVEY OF ALL ADJOINING OWNERS AND IS PREPARED FOR HIGHWAY DEPARTMENT PURPOSES ONLY.
2. UTILITY EASEMENTS AND OTHER MISCELLANEOUS RIGHT OF WAYS AND EASEMENTS LOCATED OUTSIDE OF S.H. 160 CORRIDOR MAY NOT BE SHOWN.
3. FIELD SURVEY CONTROL PRECISION COMPUTED TO EXCEED 1:30,000m.
4. NOTICE: ACCORDING TO COLORADO LAW YOU MUST COMMENCE ANY LEGAL ACTION BASED UPON ANY DEFECT IN THIS SURVEY WITHIN THREE YEARS AFTER YOU FIRST DISCOVER SUCH DEFECT. IN NO EVENT, MAY ANY ACTION BASED UPON ANY DEFECT IN THIS SURVEY BE COMMENCED MORE THAN TEN YEARS FROM THE DATE OF THE CERTIFICATION SHOWN HEREON.
5. ALL R.O.W. MARKERS SET FROM SURVEY CONTROL POINTS.
6. ALL CENTERLINE AND OFFSET STATIONING IS THEORETICAL ONLY AND MAY NOT REPRESENT THE CENTERLINE AS CONSTRUCTED IN THE FIELD.
7. ALL COORDINATES LISTED ARE PROJECT COORDINATES ONLY AND ARE LISTED IN METERS.

NARRATIVE OF RIGHT-OF-WAY LINE DETERMINATION

Several components, which include physical and documented features, were considered, evidence reviewed, weighted and prioritized during the process of determining the centerline and northerly right-of-way line of Highway 160.

Existing CDOT monuments, #31 and #32, were the basis of the first phase of control. These monuments were field surveyed by Frasier & Halbe Engineering Company (FHEC) and the bearing of N 61°50'18" W was calculated and held as the basis of bearing. The distance 352.73 meters was field measured and agreed with the calculated distance between these monuments.

The next phase of control was data received from CDOT regarding the location of the existing railroad tracks. A best fit line for each surveyed rail was determined and an average of these lines was then established as the split of the existing rails. An offset of 0.855 feet to the south was used to set the centerline of the old narrow gauge railroad. An additional adjustment of 0.17 feet to the south was required to line up the centerline of the railroad throughout the length of this project with the centerline of the railroad in the Monte Vista project. The placement of this line provides a common centerline that extends the length of both projects.

The northeasterly right-of-way line is 120 feet from the centerline of the railroad throughout the majority of the project; however this width increases toward the southeasterly portion. A parallel line 120 feet northeasterly from the railroad centerline was established as the northeasterly right-of-way line of Highway 160. Several CDOT monuments were located along this right-of-way line. All of the monuments vary in offset from 1.10 feet south of to 1.02 feet north of this established right-of-way line.

Numerous property pins were also located throughout the length of the project near the established northeasterly right-of-way line. However due to the location inconsistency of these pins, limited weight was given to them in establishing the right-of-way line. More emphasis was given to these pins in the control of easterly/westerly property line placement. The next phase of control is the actual parcel property descriptions that have been tied to the existing section corners that were field surveyed. Each parcel that has a course that is either referenced to the road right-of-way line or is referenced to the centerline of the railroad and then to the road right-of-way width; that course has been placed contiguous with and on the established right-of-way line. The remaining courses of each parcel were then adjusted to form a closed figure.

Each parcel was further adjusted to provide the best location after considering existing property pins, existing surveyed section corners and dedicated road right-of-ways. The final placement of each parcel reflects the best location as determined from the above evidence; however this final placement is not to be assumed as the final location that would result from an actual boundary survey.

No pins will be set and no land survey plats developed or filed for any of these parcels. Should there be a need to determine the true location of each parcel and to monument the corners, FHEC highly recommends that a field survey be performed and a land survey plat be developed and recorded.
