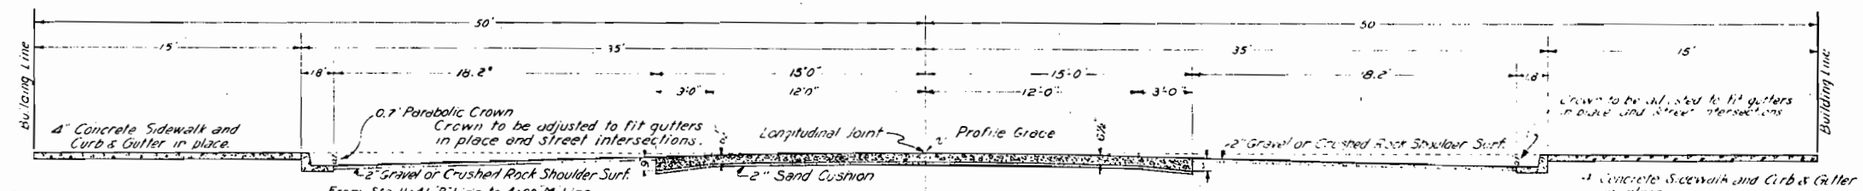
TYPICAL CROSS SECTION OF IMPROVEMENT AND SUMMARY OF QUANTITIES

TYPICAL SECTIONS

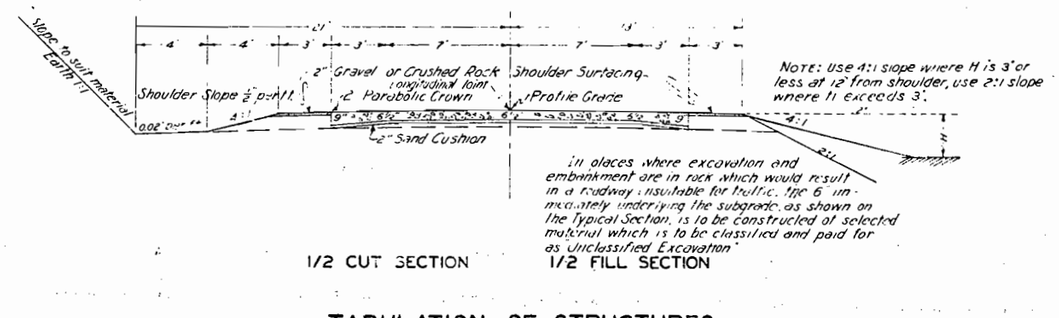


30' Section to be used at Sta. 11+41.9 "B" Line to 42+66.3 "C" Line

From Sta 11+41 "B" Line to 4+00 "M" Line, Gutters vary in elevation from 0' to 2.7'. In this section there will be no Crown, Typical Section being inclined from curb to curb.

NOTE: The present gravel surfacing which will be excavated for placing concrete pavement is to be used for constructing approaches and widening shoulders.

20' Section to be used at:
Sta. 0+12.8 to 11+41 ("B" Line)
Sta 42+66.3 to 68+05 ("C" Line)



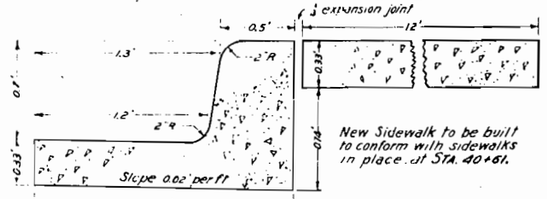
1/2 CUT SECTION

NOTE: Use 4:1 slope where H is 3' or less at 12' from shoulder, use 2:1 slope where H exceeds 3'.

In places where excavation and embankment are in rock which would result in a roadway unsuitable for traffic, type 6 immediately underlying the subgrade, as shown on the Typical Section, is to be constructed of selected material which is to be classified and paid for as "Unclassified Excavation".

1/2 FILL SECTION

DETAIL OF CURB AND GUTTER AND SIDEWALK



New Curb and Gutter at Sta. 40+61 to be built to conform with Curb and Gutter in place.

GENERAL NOTES

This project is to be constructed in conformity with the Standard Specifications of the Colorado State Highway Department, adopted January 1, 1930.

All quantities on preliminary plans are to be considered approximate only.

All curves are to be superelevated and widened as provided for by the Standard Superelevation sheet, or as indicated on the plans.

All roadway excavation required to construct this project is to be obtained as indicated on the plans. Quantities involved beyond the limits of the Typical Section as shown, either noted on the Profile as Borrow, or on the Tabulation of Structures as Embankment, are to be classified and paid for as "Unclassified Excavation." These Quantities are to be staked as part of the original excavation at locations indicated on the plans. Slope stakes, beyond the limits of the Typical Section as shown, are subject to change by the Engineer to fit Embankment requirements actually met in construction.

Except as limited by the Special Provisions, power equipment may be used on this project.

All poles encroaching on the construction are to be moved by the owners.

At all places on the project where the new work lies along the present travelled road, the Contractor shall at his own expense, prosecute construction in such a manner that traffic may readily pass over the road. Also the Contractor shall maintain in safe condition, and at his own expense, all temporary approaches.

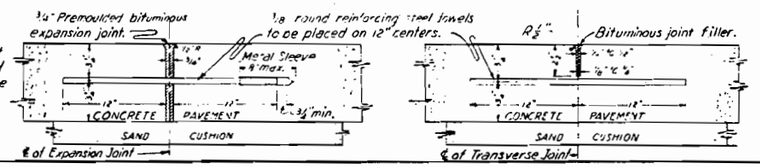
DETAILS OF EXPANSION JOINTS & LONGITUDINAL GROOVE



¾" Premoulded Bituminous Expansion Joint with steel dowels @ 12" centers are required to be constructed 90° apart, perpendicular to the ℄ of the pavement.

⅜" Holes formed in premoulded bit. j. 'nt for dowels.

Two Transverse Weakened Plane Joints with steel dowels @ 12" centers are to be constructed between joints at intervals of 30', perpendicular to the ℄ of the pavement.

Longitudinal Joint is built as this joint with the steel dowels OMITTED.
