TYPICAL CROSS SECTION OF IMPROVEMENT AND SUMMARY OF QUANTITIES

GENERAL NOTES

This Project is to be constructed in accordance with the Standard Specifications of the Colorado State Highway Department, adopted August 1, 1935.

All quantities on preliminary plans are to be considered approximate only.

All roadway excavation required to construct the Project is to be obtained as indicated on the plans. Quantities involved beyond the limits of the ditch as shown on the Typical Section, either noted on Profile as "Borrow," or on Tabulation of Structures as "Embankment," are to be classified and paid for as "Unclassified Excavation."

These quantities are to be staked as part of the original excavation at locations indicated on the plans. Slope stakes beyond the limits of the Typical Section as shown are subject to change by the Engineer to fit embankment requirements actually encountered in construction.

All curves are to be superelevated and widened as provided by the Standard Superelevation sheet.

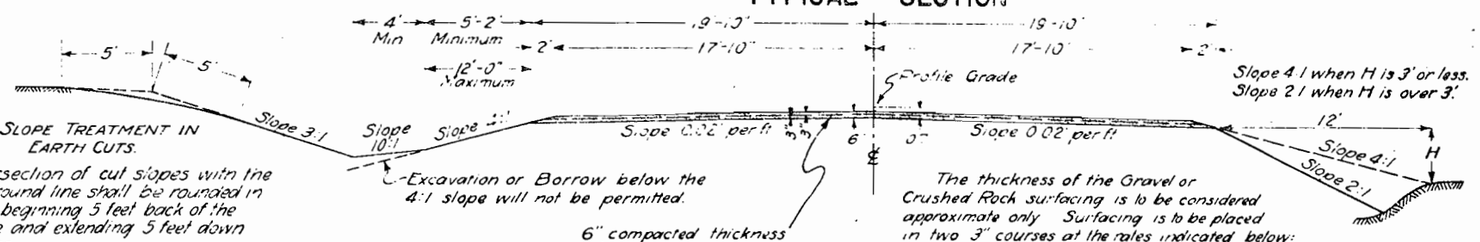
All poles encroaching on the construction are to be moved by the owners.

Clearing and Grubbing shall be of variable width and be held to the minimum required for the construction of the road, borrow pits, and channel changes, and to accommodate visibility. Ordinarily the clearing shall not extend more than 8 feet beyond the toes of the fills or the tops of the cut slopes.

Provisions regarding the construction of roads to borrow pits are set forth in the Special Provisions.

Except as noted on plans, overhaul will be paid for as measured along center line of Project.

TYPICAL SECTION



CUT SLOPE TREATMENT IN EARTH CUTS.

The intersection of cut slopes with the existing ground line shall be rounded in earth cuts beginning 5 feet back of the slope stake and extending 5 feet down the cut slope.

Where the cut slope length is less than 5 feet, reduce both of the above lengths of slope treatment to the actual slope distance. Excavation quantities involved in rounded slope shall not be included in Unclassified Excavation.

C-Excavation or Borrow below the 4:1 slope will not be permitted.

6" compacted thickness of Base Course Surfacing.

The thickness of the Gravel or Crushed Rock surfacing is to be considered approximate only. Surfacing is to be placed in two 3" courses at the rates indicated below:
3" bottom course surfacing - 59 tons per 100' of Roadway.
3" upper " " 56 " " " " "

DEAD LOAD ASSUMES 15 LBS PER SQ FT ADDITIONAL WEARING SURFACE WHICH INCLUDES THE ½ IN CONCRETE MONOLITHIC WEARING SURFACE SHOWN

GENERAL NOTES

ALL WORK SHALL BE DONE ACCORDING TO THE STANDARD SPECIFICATIONS OF THE COLORADO STATE HIGHWAY DEPARTMENT.

ALL CONCRETE SHALL BE CLASS "A".

FORMS FOR CONCRETE SURFACES EXPOSED IN THE FINISHED WORK SHALL BE CONSTRUCTED OF SHIPLAP OR TONGUE AND GROOVE LUMBER S1S UNLESS FACED WITH PANEL BOARD.

CONCRETE GIRDERS, FLOOR SLABS AND CURB SHALL BE POURED MONOLITHICALLY.

FOOTINGS IN ROCK SHALL BE POURED OUT TO THE ROCK AND NOT FORMED.

ALL REINFORCING BARS SHALL BE DEFORMED AND TAGGED WITH THE STATION NUMBER AND LETTER DESIGNATION. MAIN BARS SHALL NOT BE SPLICED.

SOUNDINGS AND DEPTH OF FOOTINGS SHOWN ARE ACCORDING TO THE BEST AVAILABLE DATA. IF ESSENTIALLY DIFFERENT CONDITIONS ARE ENCOUNTERED THE BRIDGE ENGINEER WILL INSPECT AND DETERMINE IF REDESIGN IS NECESSARY.

See Sheet No 4 for Additional General Notes.

Maximum Pressure on Abutment Toe = 450[illegible] Lbs. per Sq. Ft.

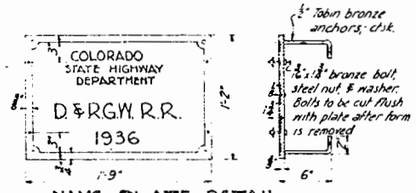
Prorated according to amounts shown on contractors invoices



NAME PLATE DETAIL

GENERAL NOTES

ALL WORK SHALL BE DONE ACCORDING TO THE STANDARD SPECIFICATIONS OF THE COLORADO STATE HIGHWAY DEPARTMENT, ADOPTED AUG. 1, 1935
ALL CONCRETE SHALL BE CLASS 'A'.
FORMS FOR CONCRETE SURFACES EXPOSED IN THE FINISHED WORK SHALL BE CONSTRUCTED OF SHIPLAP OR TONGUE AND GROOVE LUMBER S4S UNLESS FACED WITH PANEL BOARD.
CONCRETE PIERS, FOOTINGS, SLABS AND CURB SHALL BE POURED MONOLITHICALLY.
FOOTINGS IN ROCK SHALL BE POURED OUT TO THE ROCK AND NOT FORMED.
ALL REINFORCING BARS SHALL BE DEFORMED AND TAGGED WITH THE STATION NUMBER AND LETTER DESIGNATION. MAIN BARS SHALL NOT BE SPLICED.
SOUNDINGS AND DEPTH OF FOOTINGS SHOWN ARE ACCORDING TO THE BEST AVAILABLE DATA. IF ESSENTIALLY DIFFERENT CONDITIONS ARE ENCOUNTERED THE BRIDGE ENGINEER WILL INSPECT AND DETERMINE IF REDESIGN IS NECESSARY.
ALL RIVETS SHALL BE ⅞" ø, FIELD RIVETS SHALL BE POWER DRIVEN.

LOADING DATA.
LIVE LOAD A.A.S.H.O. 1935 CLASS A. H-15
DEAD LOAD ASSUMES 15 LBS. PER SQ. FT. ADDITIONAL WEARING SURFACE WHICH INCLUDES THE 4" IN CONCRETE MONOLITHIC WEARING SURFACE SHOWN

See General Layout (Sheet 8) for index of Reference Drawings.

GENERAL NOTES

All work shall be done according to the Standard Specifications of the Colorado State Highway Dept. adopted Aug. 1, 1935.

All concrete shall be class "A".

All exposed surfaces shall be rubbed free of form marks.

All walls shall have forms on both sides.

Minimum distance between ℄ of bar and edge of concrete to be 2½".

All construction joints shall be thoroughly cleaned before fresh concrete is poured.

All reinforcing bars shall be deformed and tagged with the station number and letter designation. Main bars shall not be spliced.

Pour wing footing and outlet check wall monolithically with floor of box.

The use of additional construction joints is undesirable. Should field conditions require, construction joints may be made on a vertical plane perpendicular to the centerline of culvert and shall have a 2"x 3" key.

Supporting soils for all culverts must be composed of firm and uniform material throughout.

All backfilling shall be laid in layers not exceeding 6" in depth and each layer shall be rolled or hand tamped where inaccessible to roller, also moistened when necessary.

DATA REQUIRED TO ACCOMPANY SITUATION PLAN.

I. GENERAL REMARKS.

Fill out all blanks with care, giving information on all points listed, and supplementary remarks on features not listed. High water and foundation conditions are especially important and should be thoroughly investigated.

II. PROFILE.

Plot profile of centerline of roadway. Use natural scale, preferably 1"–10', or multiple of 10'.

At proper locations show section of test pits, noting material encountered, if available at time of survey.

Show present, and if possible, proposed finished grade noting elevations and gradients.

III. MAP.

Show present and proposed alignment of bridge and all approaches, as far as affected. Extend Cross sections at least 100-ft. each side of C. L., giving location and elevation of points so that at least 2-foot contours may be accurately plotted. Show edge of water, islands, shoals, other obstructions, and direction of current at high water and at low water. Plot location of test pits, position and pointing of camera for each photo, all buildings, fences, and other features affected. Establish bench marks and give location of same. Reference C. L. and show North point. Give a C. L.-profile of stream-bed for 500 feet up-stream and 500 feet down-stream from center line of survey. Plot proposed structure in soft pencil only. Do not ink.

IV. REPORT OF EXAMINATION OF BRIDGE-SITE.

Div.____ County____ Route____ Sec.____ Sta.____

Date of survey____ To be built by____

1. Bridge Site____
   - Location____
   - Sec. 22 Twp. 10S Range 80 W Local name Snowden
   - Over Arkansas River Creek____
   - Distance from nearest shipping point 5 Mi. to Malta
2. Source of materials____
   - Sand____ Length of haul to site____ miles____
   - Gravel____ " " " " " ____ " ____
   - Stone____ " " " " " ____ " ____
   - Falsework Timber____ " " " " " ____ " ____
   - Piling____ " " " " " ____ " ____
3. Cost Data.—
   - Cost of following materials at site____
     - Portland Cement____ Per Bbl.
     - Sand, coarse and clean____ " Cu. Yd.
     - Gravel____ " " "
     - Stone____ " " "
     - Falsework Timber____ " Ft. B. M.
     - Piling____ " Lin. Ft.
   - Cost per ton-mile for hauling____
4. Waterway.—
   - Drainage area in Sq. Miles (approximate) 240 (3245 Dunn)
   - Character of watershed Mountainous
   - Elevation of Highest water____ Date____
   - Source of information on water elevation____
   - Elevation of ordinary high water____
   - Elevation of low water Max. Stream Flow = 2900 sec. ft. @ 10 ft. per sec (State Eng. Office)
   - Elevation of permanent ground-water____
   - Is stream ever dry?____ During what months?____
   - Will all flood water pass through recommended structure?____
   - Can channel be cleaned to afford more waterway?____
   - Is stream-bed cutting or silting up? Some Scour at Present South Abutment
   - Is stream stable in its banks?____ Depth of scour?____
   - Does stream carry light, medium, or heavy drift? Light
   - What clearance above high water should be allowed?____
   - Is channel change necessary?____
   - If channel change is necessary, illustrate location on sketch map.
5. Foundation Data.—
   - Character of material Rod Sounding at Sta 401+00 to El. 9295 Shows gravel & boulders
   - Distance from stream-bed to solid foundation____
   - Recommended depth of footings____
   - Should piles be used?____ What length?____ Pile Shoes?____
6. Old Bridge.— 1/4 Mile down Stream
   - If there is no bridge at the present location include here data on nearest bridge over same stream. If possible show location of such bridge or bridges on the map. Photographs if available.
   - Type____ Roadway Width____ Number and length of spans 2 @ 40'-0"
   - Area of waterway provided under old structure 560 Sq. Ft., Elev. of Underclearance 7'
   - Has this area proved sufficient at flood times? Yes Skew Angle____
   - Is it too large?____ Disposition of Existing Structure____
7. Give foundation data on bridges in vicinity. When possible, get pile driving data, logs of borings, etc., for adjoining structures, and where considered advantageous procure plans.
   - Sketch profile of Rail Road Crossing if within 1000 ft. of Highway. (Show X-section of entire waterway.)
   - Elevation of base of Rail____ Elevation of Rail Road Underclearance____
   - Remarks____
8. Recommendations for New Structure.—
   - Type I-Bm. Conc. Width curb to curb 30.0 Number and length of spans 2 @ 52'-0"
   - What is the least clear span permissible?____
   - Are sidewalks desired? No Lighting conduit? No Light standards? No
   - Angle of Skew recommended 60° 00'
   - Will approaches be desired, or will same be filled?____
   - Approximate cost per Cu. Yd. of approach-filling at bridge site?____
   - Is it necessary to maintain traffic alongside old structure?____
   - If so, how shall it be done?____
   - R. R. Siding____ Haul to Bridge Site____ Mi.
   - Remarks____

Submitted by____
Engineer.

NOTE.—When bridge is recommended to be left in place, complete structural details shall be procured from the bridge itself or from existing plans of the structure. When possible these plans shall be forwarded with the plans of the project.

STRUCTURE NOTES FOR BRIDGE, STA. 407+36.0 to 408+38.2
STR. NO. H-11-J
Present Structure:
Span
Clear Roadway
Clear Waterway
Type of Superstructure
Type of Substructure
Requirements as to removal
Stream Data:
Drainage area in Sq. Miles ~ 240
Velocity during high water ~ 2900 Sec.Ft. @ 10 Ft. per Sec.
Elevation of:
Maximum high water
Normal Stage
Drift ~ Light
Low water
Stream bed ~ 9300.5
Scour ~ Some
New Alignment
Proposed Structure:
Position referred to present structure
Span ~ 1 @ 100' Span ~ Steel Low Truss
Clear roadway ~ 30'-0"
Clear waterway ~ 1900□"
Type of Superstructure ~ Steel Truss & Concrete Floor
Type of Substructure ~ Concrete Cantilever Abutments
Detour Structure requirements ~ None
R.R. Siding ~ Malta
Haul to bridge site ~ 5 Miles
